

## Attachment A

“Meaningful Use” refers to the following criteria:

- 1) Protect electronic health information created or maintained by the certified EHR technology through the implementation of appropriate technical capabilities. Conduct or review a security risk analysis and implement security updates as necessary and correct identified security deficiencies.
- 2) Implement 5 clinical decision support interventions related to clinical quality measures.
- 3) Medication orders directly entered into the medical record.
- 4) Lab orders directly entered into the medical record.
- 5) Radiology orders directly entered into the medical record.
- 6) Implement drug-drug and drug-allergy checks.
- 7) Generate and transmit permissible prescriptions electronically.
- 8) When transitioning care to another health care provider, provide a summary of care document to the other provider.
- 9) Provide patients with patient-specific education resources identified by the EHR.
- 10) Perform medication reconciliation for patients transitioned into care of the provider.
- 11) Provide patients with timely access to view online, download, and transmit to a third party their health information.
- 12) Use secure electronic messaging to communicate with patients on relevant health information.
- 13) Submit electronic public health data from EHR to specialized registries except where prohibited and in accordance with applicable law and practice.
- 14) Report clinical quality measures.
