EMCC Annual Report 2020

EMERGENCY MEDICAL CARE COMMITTEE

1 | BACKGROUND

Section 1797.270 *et seq* of the California Health and Safety Code permits counties to have an Emergency Medical Care Committee (EMCC), and resolution #07-593 of the Nevada County Board of Supervisors established such a committee to advise the Board and the Sierra-Sacramento Valley Emergency Services Agency (S-SV) on issues concerning provision of emergency medical services in Nevada County.

A | Annual Reporting

The Health and Safety Code proposes that the EMCC shall, at least annually, review the operations of each of the following:

- Ambulance services operating within the county,
- Emergency medical care offered within the county, including programs for training large numbers of people in cardiopulmonary resuscitation and lifesaving first aid techniques, and
- First aid practices in the county.

This report to the Board and S-SV is a fulfillment of that responsibility.

B | Membership

The Board prescribes the membership of the committee, and this annual report is co-authored by the following member agencies

Private Ground Ambulance Provider:

Dignity Health- Sierra Nevada Memorial Hospital
Ambulance Service

Peardale-Chicago Park FPD (Unincorporated EMS
Provider)

CALFIRE (Dispatch Center)

Acute Care Hospital Emergency Rooms:

Dignity Health- Sierra Nevada Memorial Hospital
Tahoe Forest Hospital

County Departments:

Nevada County Public Health Officer
Nevada County OES Manager

Provider Agencies:

Grass Valley Fire Dept. (Incorporated City or Town
EMS Provider)
Penn Valley FPD (Unincorporated Western Nevada
County ALS Provider)
Truckee FPD (Unincorporated Eastern Nevada
County ALS Provider)

Ex-officio non-voting members:

Sierra-Sacramento Valley Emergency Medical
Services Agency (S-SV)
Nevada County Sheriff's Office
One incorporated city police department (Grass
Valley)
Nevada County Fire Chief's Association
American Red Cross

In 2020, we witnessed an introduction of fentanyl into Nevada County’s drug supply. Fentanyl is a powerful synthetic opioid that is 50 times more potent than heroin. Fentanyl can be present in counterfeit pills and other substances. Many individuals consume fentanyl without their knowledge because they do not realize that it is in a product they’re using. As a result, we experienced an increase in accidental overdoses due to fentanyl and total overdose deaths. In 2019, there were zero accidental overdose deaths related to fentanyl and in 2020 there were 17, ranging from young adults to senior citizens.

C | CPR & First Aid Practices

Due to the COVID-19 pandemic, many training programs for these disciplines were shut down for much of the year. They require in-person, hands-on application of skills that were not possible under the health orders in place. These orders stretched into the year 2021.

D | Novel Coronavirus 2019 (COVID-19)

RESPONSE:

- **Agencies implement alternative Personal Protective Equipment (PPE).** Providers continually modified PPE usage based on ever-changing public health and CDC guidance in the early stages of the pandemic. PPE was difficult to near impossible to locate in the early months.
- **Changes to daily practices.** Many responder agency offices closed to the public. Police and Fire kept employees separated as much as possible and masks became the order of the day. Training was significantly curtailed and remotely performed when possible. Many agencies were negatively impacted by staff contracting the virus, resulting in overtime and short staffing.
- **Response changes.** Fire agencies ceased routinely performing “lift-assists” at elderly and congregate living facilities, asking their staff to perform this service. Police agencies changed to taking many non-violent crime reports remotely or via computer technology. During the first few months most emergency response agencies saw a 10-30% reduction in calls for service.
- **Large fire response.** Fire agencies completely changed their organization of camps and living/dining facilities. Crews kept to themselves, only sending the bare minimum members into fire camp for supplies and food. Most fire camps required daily temperature checks and surveys of symptoms.

RECOVERY:

- **Early vaccine administration.** Many first responders were deemed by public health to be eligible for the first tier of vaccine administration. This included EMS personnel from the ambulance services and EMTS/Paramedics affiliated with all fire agencies. Shortly, all fire and police personnel were offered vaccination. While not every first responder has accepted the vaccine, every first responder has been offered it free of charge.
- **Continued PPE usage.** Providers continue to use appropriate PPE when in a healthcare setting, following CDC’s latest guidance. Many agencies have relaxed requirements for masking when not engaged in medically related procedures.

Emergency Medical Care Committee

2020 Chairperson: Clayton Thomas, Penn Valley FPD
